ROOTSGOODS

BUSINESS REQUIREMENTS DOCUMENT

Combined Role-Wise BRD

Client Review Copy

Included roles

- Integrated Farmer
- Layer Farmer
- Shed Worker
- Veterinarian
- Feed Manufacturer
- Medicine Supplier
- Administrator

This document consolidates the seven role-specific BRDs into one file. Items that require client confirmation remain assumptions or open questions rather than confirmed demo functionality.

ROOTSGOODS

BUSINESS REQUIREMENTS
DOCUMENT

Integrated Farmer

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The Integrated Farmer workspace supports day-to-day farm operations across sheds and birds, workers, tasks, daily records, sick birds, maize received at the gate, health schedules, egg/sales tracking, ledger, veterinarian linkage, and farm settings.

1. Document Overview

Role: Integrated Farmer

The Integrated Farmer workspace supports day-to-day farm operations across sheds and birds, workers, tasks, daily records, sick birds, maize received at the gate, health schedules, egg/sales tracking, ledger, veterinarian linkage, and farm settings.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for integrated farmer.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Today / Farm overview

Provide a daily entry point for the integrated farm role and quick access to operational work. Exact dashboard KPIs and calculations should be confirmed against the final UI.

Sheds & birds

View and manage farm shed and bird information. Confirm shed creation/editing fields, flock/batch lifecycle, capacity rules, and bird-count adjustment permissions.

Workers & logins

Manage worker identities or logins associated with the farm. Confirm worker invitation/PIN setup, deactivation, and whether a worker can be assigned to one or multiple sheds.

Tasks

Review and manage operational tasks. Confirm task creation fields, assignment rules, due dates, statuses, reminders, and completion evidence.

Daily records

Enter or review routine farm records. Confirm record types, required measurements, edit windows, and whether past entries require an audit trail.

Sick birds

Record or review sick-bird information and surface reports for veterinary follow-up. Confirm minimum fields, severity categories, photo support, and case closure workflow.

Maize at the gate

Capture maize/feed-related arrivals at the farm gate. Confirm supplier, quantity/unit, vehicle/receipt reference, quality checks, stock posting, and discrepancy handling.

Health

Maintain vaccination/medicine schedules with product, due date, shed, dose, and withdrawal-days field labelled “No egg sale for”. Support marking an item as given and adding items to the schedule.

Eggs & sales

Track egg sales and related quantities/amounts. The demo includes peti count, sold amount, and outstanding amount owed to the farmer for unpaid sales. The demo assumes 1 peti = 210 eggs; confirm whether this is fixed or configurable.

Ledger

Review farm ledger entries or balances. Confirm transaction types, who can add/edit entries, settlement rules, and reconciliation/export requirements.

My vet

Access the veterinarian linked to the farm. Confirm how the vet is assigned, whether more than one vet can be linked, and whether contact/consultation history is required.

Farm settings

Maintain farm-level settings. Confirm editable profile fields, units, language defaults, and who can change configuration.

4. Primary User Workflow

Farmer signs in and opens the farm’s daily workspace.

Farmer reviews sheds/birds and workers, then assigns or reviews operational tasks.

Farm activity is recorded through daily records and gate-arrival entries.

Health schedules are reviewed; administered medicine/vaccination items are marked as given.

Sick-bird information is recorded for veterinary follow-up.

Egg sales and unpaid balances are reviewed alongside the ledger.

5. Functional Requirements

FR-01: The system shall provide the Integrated Farmer role with the modules listed in this BRD.

FR-02: The system shall associate operational records with the relevant farm and, where applicable, shed.

FR-03: The system shall support adding health schedule items and marking scheduled treatment/vaccination as given.

FR-04: The system shall display sales and unpaid/outstanding amounts represented by the demo.

FR-05: The system shall use a clearly defined and client-approved egg-to-peti conversion rule.

6. Access Control & Data Handling

Role boundary: Integrated Farmer must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo’s sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

Only authorized Integrated Farmer accounts can access this workspace and its permitted actions.

Records entered against a shed/farm remain associated with the correct entity after saving and reopening.

Health schedule entries display product, due date, shed, dose, and withdrawal-days information when applicable.

Egg/sales screens calculate and display the agreed quantities and outstanding amounts using client-approved rules.

Any unsupported or not-yet-built behavior is identified as out of scope rather than represented as complete.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

Confirm egg/peti conversion: the demo assumes 1 peti = 210 eggs.

Confirm exact rules for unpaid sales, ledger reconciliation, health withdrawal periods, and feed/maize receiving.

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Features explicitly identified in this document as requiring client confirmation.

12. Approval

ROOTSGOODS

BUSINESS REQUIREMENTS
DOCUMENT

Layer Farmer

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The Layer Farmer workspace is focused on layer-farm operations and includes the shared farm modules shown in the demo, with Feed deliveries in place of the Integrated Farmer’s Maize at the gate entry.

1. Document Overview

Role: Layer Farmer

The Layer Farmer workspace is focused on layer-farm operations and includes the shared farm modules shown in the demo, with Feed deliveries in place of the Integrated Farmer’s Maize at the gate entry.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for layer farmer.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Today / Farm overview

Provide a daily entry point to layer-farm activity. Confirm the final KPI cards, calculations, and shortcuts.

Sheds & birds

View and manage layer sheds and bird information. Confirm flock lifecycle, bird counts, and shed-specific rules.

Workers & logins

Manage worker access associated with the farm. Confirm PIN lifecycle, worker-to-shed assignments, and access revocation.

Tasks

Review and manage layer-farm tasks. Confirm assignment, due dates, completion statuses, reminders, and proof-of-completion requirements.

Daily records

Capture routine layer-farm records. Confirm exact record types, measurements, validation, and historical edit policy.

Sick birds

Record sick-bird observations and provide information for veterinary review. Confirm severity, photos, case status, and follow-up workflow.

Feed deliveries

Capture feed delivery information. Confirm supplier, feed type, quantity/unit, delivery date, receipt/reference number, quality checks, inventory posting, and discrepancy process.

Health

Maintain vaccination/medicine schedules with product, due date, shed, dose, and withdrawal-days field (“No egg sale for”). Users can mark an item as given and add a schedule item, as represented in the demo.

Eggs & sales

Track egg output/sales information, peti counts, sold amounts, and outstanding unpaid sales. The demo assumes 1 peti = 210 eggs; client confirmation is required.

Ledger

Review farm financial ledger information. Confirm supported transaction types, edit permissions, settlement, and reporting.

My vet

View or access the veterinarian linked to the farm. Confirm vet assignment and whether contact/consultation history is needed.

Farm settings

Maintain farm settings. Confirm profile fields, unit preferences, and configuration permissions.

4. Primary User Workflow

Layer Farmer signs in and reviews the daily farm workspace.

Farm staff and tasks are maintained, and routine records are entered.

Feed deliveries are logged and reconciled using the agreed business rules.

Health schedules are maintained and completed treatment/vaccination is recorded.

Egg production/sales and outstanding balances are reviewed.

5. Functional Requirements

FR-01: The system shall provide the Layer Farmer with the modules listed in this BRD.

FR-02: The Layer Farmer navigation shall include Feed deliveries, as represented in the demo.

FR-03: The system shall associate feed delivery records with the correct farm and retain the agreed delivery details.

FR-04: The system shall support health schedule creation and completion recording.

FR-05: The system shall calculate egg/peti quantities and sales balances according to client-approved rules.

6. Access Control & Data Handling

Role boundary: Layer Farmer must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo’s sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

Layer Farmer accounts see only authorized farm data and actions.

Feed delivery records can be created, reviewed, and tied to the correct farm; final mandatory fields are client-approved.

Health and egg/sales functions behave according to agreed acceptance examples.

The 1-peti conversion and unpaid-sales calculation are documented and approved before release.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

Confirm egg/peti conversion: the demo assumes 1 peti = 210 eggs.

Confirm exact rules for unpaid sales, ledger reconciliation, health withdrawal periods, and feed/maize receiving.

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Features explicitly identified in this document as requiring client confirmation.

ROOTSGOODS

BUSINESS REQUIREMENTS
DOCUMENT

Shed Worker

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The Shed Worker experience is a simplified, task-focused workflow intended for use on the farm phone. The demo provides My tasks, Daily entry, and Report a problem, with a PIN flow and shed selection.

1. Document Overview

Role: Shed Worker

The Shed Worker experience is a simplified, task-focused workflow intended for use on the farm phone. The demo provides My tasks, Daily entry, and Report a problem, with a PIN flow and shed selection.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for shed worker.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Worker PIN access

Allow a worker to enter the PIN flow on a farm phone. Demo sample PINs are test credentials only and must not be reused in production.

Shed selection

Allow the worker to select the relevant shed before completing shed-specific work. Confirm whether assignment should restrict available sheds.

My tasks

Show tasks assigned to the worker. Confirm task details, status options, due dates, and whether workers can decline or reassign tasks.

Daily entry

Provide a simplified interface for entering daily operational information. Exact fields and record types must be approved by the client.

Report a problem

Allow workers to raise a problem/issue. Confirm categories, free-text details, photo attachments, urgency, acknowledgement, and resolution status.

4. Primary User Workflow

Worker opens the farm phone workflow and enters their PIN.

Worker selects or confirms the assigned shed.

Worker reviews assigned tasks and records task progress/completion where permitted.

Worker enters daily information or reports a problem for farm management follow-up.

5. Functional Requirements

FR-01: The system shall provide a worker-specific interface with My tasks, Daily entry, and Report a problem.

FR-02: The system shall authenticate worker access using the approved PIN workflow.

FR-03: The system shall associate worker entries with the authenticated worker and selected/assigned shed.

FR-04: The system shall prevent workers from accessing farmer-only, supplier, veterinarian, or administrator modules.

6. Access Control & Data Handling

Role boundary: Shed Worker must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo’s sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

Invalid PINs are rejected and do not reveal protected farm information.

Worker sees only tasks and sheds permitted by the approved assignment rules.

Daily entries and problem reports preserve worker, farm, shed, and timestamp context where supported by the final data model.

Worker interface remains limited to the approved worker functions.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Features explicitly identified in this document as requiring client confirmation.

ROOTSGOODS

BUSINESS REQUIREMENTS
DOCUMENT

Veterinarian

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The Veterinarian workspace provides access to sick-bird reports, farms linked to the veterinarian, and the veterinarian’s practice profile.

1. Document Overview

Role: Veterinarian

The Veterinarian workspace provides access to sick-bird reports, farms linked to the veterinarian, and the veterinarian’s practice profile.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for veterinarian.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Sick-bird reports

Review sick-bird information submitted by linked farms/workers. Confirm report fields, filters, severity, photo access, case status, and ability to add advice or treatment notes.

Farms linked to me

View farms associated with the veterinarian. Confirm who creates/approves the relationship, whether farms can be linked to multiple vets, and what farm data is visible.

My practice

View or maintain veterinarian practice details. Confirm profile fields, qualifications, registration details, service areas, contact details, and verification requirements.

4. Primary User Workflow

Veterinarian signs in.

Veterinarian reviews sick-bird reports from linked farms.

Veterinarian opens the relevant farm context and follows the agreed consultation or follow-up process.

Veterinarian reviews or updates practice information where authorized.

5. Functional Requirements

FR-01: The system shall provide the Veterinarian role with Sick-bird reports, Farms linked to me, and My practice.

FR-02: The system shall restrict the veterinarian's farm and bird data access to the approved linked-farm scope.

FR-03: The system shall make report details available according to the final permissions model.

FR-04: The system shall distinguish demo report viewing from any clinical advice, prescription, or treatment workflow not explicitly confirmed.

6. Access Control & Data Handling

Role boundary: Veterinarian must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo's sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

Veterinarian accounts can view only farms and reports they are authorized to access.

Sick-bird report fields and attachment access match the client-approved specification.

Practice profile fields and edit permissions are documented and tested.

Any advice, prescription, chat, appointment, or notification feature is treated as unconfirmed unless separately approved.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Feed Manufacturer

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The supplied demo exposes a Feed Manufacturer role with a Mill profile screen. The demo evidence does not establish a complete ordering, fulfilment, delivery, invoicing, or payment workflow for this role.

1. Document Overview

Role: Feed Manufacturer

The supplied demo exposes a Feed Manufacturer role with a Mill profile screen. The demo evidence does not establish a complete ordering, fulfilment, delivery, invoicing, or payment workflow for this role.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for feed manufacturer.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Mill profile

View or maintain the feed mill/manufacturer profile. Confirm fields such as legal/business name, address, contact person, phone/email, product categories, operating areas, and verification documents.

Access and account

Authenticate the manufacturer account and restrict access to its own profile. Confirm account onboarding, approval, and password/PIN reset processes.

4. Primary User Workflow

Feed Manufacturer signs in.

Manufacturer opens the Mill profile screen.

Manufacturer reviews or updates permitted profile information, subject to approved verification and edit rules.

5. Functional Requirements

FR-01: The system shall provide the Feed Manufacturer role with the Mill profile screen represented in the demo.

FR-02: The system shall restrict manufacturer users to authorized profile data and actions.

FR-03: The system shall validate mandatory profile fields as defined during client sign-off.

FR-04: Order placement, feed catalogue, quotations, delivery tracking, invoices, payment collection, and inventory integrations are not confirmed by the supplied demo and require separate scope approval.

6. Access Control & Data Handling

Role boundary: Feed Manufacturer must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo’s sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

An authorized manufacturer can view its own mill profile.

Only approved fields can be edited by the manufacturer role.

Unauthorized access to farmer, veterinarian, medicine supplier, or administrator data is denied.

Any additional supplier commerce workflow is separately specified before it is treated as in scope.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

Confirm whether catalogue, ordering, stock, delivery, invoicing, and payment functions are part of a future phase.

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Medicine Supplier

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The supplied demo exposes a Medicine Supplier role with a Company profile screen. A complete medicine catalogue, ordering, prescription validation, fulfilment, invoicing, or payment workflow is not established by the demo evidence.

1. Document Overview

Role: Medicine Supplier

The supplied demo exposes a Medicine Supplier role with a Company profile screen. A complete medicine catalogue, ordering, prescription validation, fulfilment, invoicing, or payment workflow is not established by the demo evidence.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for medicine supplier.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Company profile

View or maintain medicine supplier company details. Confirm company name, address, contact person, phone/email, product categories, service area, and any required licences or verification documents.

Access and account

Authenticate the supplier account and restrict access to its own profile. Confirm onboarding, approval, and account recovery rules.

4. Primary User Workflow

Medicine Supplier signs in.

Supplier opens the Company profile screen.

Supplier reviews or updates permitted company information, subject to the approved permissions and validation rules.

5. Functional Requirements

FR-01: The system shall provide the Medicine Supplier role with the Company profile screen represented in the demo.

FR-02: The system shall restrict supplier users to authorized profile data and actions.

FR-03: The system shall validate required company profile fields according to client-approved rules.

FR-04: Medicine catalogue, stock availability, purchase orders, prescription controls, delivery tracking, invoices, and payments are not confirmed by the supplied demo and require separate scope approval.

6. Access Control & Data Handling

Role boundary: Medicine Supplier must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo’s sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

An authorized supplier can view its own company profile.

Profile edits follow approved field-level permissions and validations.

Supplier accounts cannot access farmer, veterinarian, feed manufacturer, or administrator records unless explicitly authorized.

Any medicine ordering or regulated-product workflow is separately defined and approved.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

Confirm whether catalogue, ordering, stock, delivery, invoicing, and payment functions are part of a future phase.

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Features explicitly identified in this document as requiring client confirmation.

ROOTSGOODS

BUSINESS REQUIREMENTS
DOCUMENT

Administrator

Document purpose	Client review and requirements confirmation
Source baseline	RootsGoods Pilot Demo HTML, dated 15 October 2026
Document status	Draft for validation
Version	1.0

The supplied demo exposes an Administrator workspace titled Pilot accounts. The confirmed scope is limited to pilot-account administration; broader platform administration must be defined separately.

1. Document Overview

Role: Administrator

The supplied demo exposes an Administrator workspace titled Pilot accounts. The confirmed scope is limited to pilot-account administration; broader platform administration must be defined separately.

This document separates the requirements for this role from the other RootsGoods roles. It is intended to support client review, scope confirmation, and implementation planning.

2. Business Objectives

Provide a clear, role-specific workspace for administrator.

Make the functions shown in the pilot demo explicit and reviewable.

Define the minimum expected behavior and access boundaries before production implementation.

Identify unresolved rules so the client can approve them instead of relying on assumptions.

3. Scope — Included Modules

Pilot accounts

View/manage pilot accounts as represented in the demo. Confirm whether administrators can create, edit, activate/deactivate, reset, or delete accounts and which account fields are available.

Role and access governance

Confirm how roles are assigned and changed, how accounts are approved, and how access is revoked. The demo’s presence of role-based screens does not alone establish a complete permissions-management console.

Demo data reset

The demo includes a reset-demo-data capability. Treat this as a demo/testing utility only; it must not be available in production unless explicitly approved and protected.

4. Primary User Workflow

Administrator signs in.

Administrator opens Pilot accounts.

Administrator reviews pilot accounts and performs only the actions supported by the final approved design.

Account and role changes, if included, are validated and logged according to client-approved policy.

5. Functional Requirements

FR-01: The system shall provide the Administrator role with the Pilot accounts module represented in the demo.

FR-02: The system shall restrict administrator access to authorized administrative users.

FR-03: The system shall define and enforce role assignment, account lifecycle, and permission rules before production release.

FR-04: Demo reset functionality shall be isolated from production data and production accounts.

6. Access Control & Data Handling

Role boundary: Administrator must only access approved screens, records, and actions for this role.

Farm/shed ownership and linked-record visibility must be confirmed and enforced consistently.

Authentication, session expiry, account recovery, and failed-login handling require production-level specification.

Sensitive operational and financial records should not be exposed to unrelated roles.

The demo’s sample accounts/PINs are for testing only and are not production credentials.

7. Non-Functional Requirements

Usability: use role-appropriate navigation and clear labels suitable for farm operations.

Reliability: saved records should persist and be recoverable according to the approved hosting and backup design.

Performance: common screens and record submission should meet client-approved response-time targets.

Security: enforce server-side authorization, secure credential handling, and protected data transport in production.

Auditability: decide which edits, account changes, and health/financial actions require timestamps and user attribution.

Language: the demo contains English, Kannada, Marathi, Punjabi, Telugu, Tamil, and Hindi options; exact translation coverage and fallback behavior must be verified.

8. Acceptance Criteria

Only authorized administrators can access Pilot accounts.

Account-management actions available to administrators match the signed-off scope.

Role changes immediately enforce the intended permissions and cannot be performed by unauthorized roles.

Production environment does not expose demo reset/test credentials or unsafe demo-only utilities.

9. Assumptions & Dependencies

This BRD documents the role-specific capabilities represented in the supplied RootsGoods pilot demo. A demo screen or button does not, by itself, confirm a production-ready backend integration.

Final business rules, required fields, validation rules, notifications, audit history, export/reporting, and integration behavior must be confirmed with the client before implementation sign-off.

Role access must be enforced by the application, not only by hiding menu items in the interface.

Any personal, farm, flock, veterinary, supplier, or financial data must be protected through appropriate authentication, authorization, backups, and retention policies; production security details are outside the evidence provided by the demo.

10. Open Questions for Client Sign-off

Which fields are mandatory on each screen, and what validation rules should apply?

Which actions can each role create, view, edit, approve, export, or delete?

What notifications, reminders, reports, exports, and audit logs are required?

What should happen when connectivity is lost or a record submission fails?

What are the final hosting, backend, backup, security, and data-retention requirements?

Which pilot-demo features are required for Phase 1, and which should be deferred to a later phase?

Confirm the full account lifecycle and explicitly decide whether demo reset utilities must be removed from production.

11. Out of Scope Unless Separately Approved

Any screen, integration, automation, or workflow not represented in the supplied demo or explicitly described above.

Payment gateway, accounting integration, external ERP integration, SMS/WhatsApp/email provider setup, and third-party APIs unless separately scoped.

Production security certification, legal/regulatory compliance assessment, and infrastructure sizing.

Features explicitly identified in this document as requiring client confirmation.
